Riveting

RV8H 8Ton 18V Hydraulic Riveting

The RV8H is a riveting device with many standard and optional features, yet it manages to stay user-friendly thanks to its practical and multifunctional design. For instance, its user can mount special actuators for blind rivets and threaded bushes. Also, the RV8H is equipped with presettable programs (time, pressure and stroke) to match the specs required by the car manufacturer. Pressing time can be regulated, and when a set force is obtained, the device can retract automatically. To top it all off, the RV8H is a remarkably silent device.

Features

- Light, compact, and portable pump body
- Approved by Ford
- Suitable for many different car brands and types
- Compression arms sizes: 40, 120, or 240 mm
- Real-time information display
- Built-in software to track riveting

Technical data

Pushing and pulling capacity	8	tons
Pump weight	3.8	kg
Compression head rotation	360	degrees
Adjustable compression force	20-95	kN
